

Title of ADR

Determining Permissions for the Mobile App

Status

Proposed

Context

To provide core functionalities like offline browsing, push notifications, and image caching, the app requires specific permissions.

Options Considered

• Internet access • Push notifications • Device storage • Camera • Location

Decision

The app will request permissions for Internet access, push notifications, and device storage.

Consequences

Pros:

- Ensures core functionalities work as intended.

Cons:

- Users might be wary of granting permissions; clear communication is essential.

Rationale

Internet, notifications, and storage permissions are fundamental for the app's core features.

Follow-Up Actions

- Integrate permissions requests in the app.
- Ensure GDPR and other data protection regulations are followed.
